Project Design Phase
Problem – Solution Fit

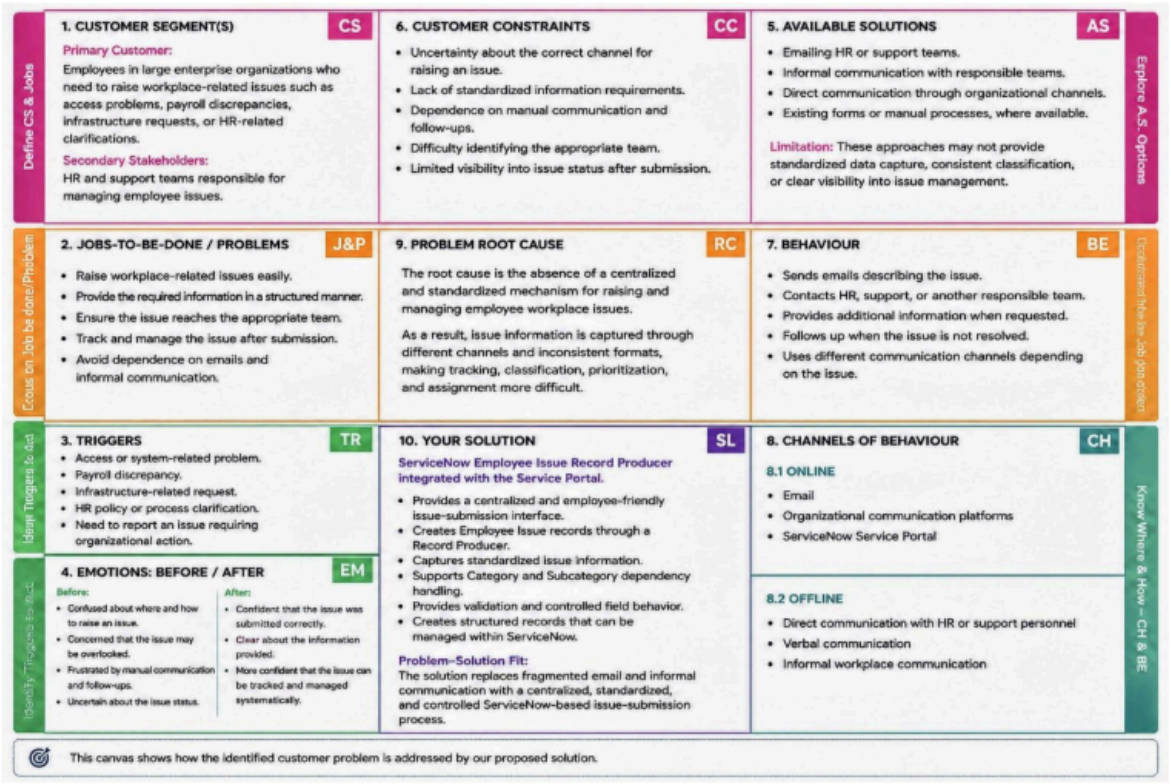

Date	16 August 2026
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration
Maximum Marks	2 Marks

Problem-Solution Fit Model

The **Problem-Solution Fit** framework validates that a well-defined operational friction point experienced by the end-user has been successfully addressed by the deployed system capabilities. By analyzing user behavior patterns, operational inefficiencies, and daily friction, this alignment ensures that the engineered solution delivers measurable value and drives organic adoption.

Strategic Purpose

- **Context-Aware Problem Solving**: Address complex business and operational challenges with a tailored approach that fits into the current working environment of the target users.
- **Accelerated User Adoption**: Maximize deployment success and speed up time-to-value by seamlessly integrating new solutions into existing workflows, communication mediums, and behavioral routines.
- **Targeted Communication & Enablement**: Sharpen training programs, change management processes, and stakeholder communications by aligning the right operational triggers with clear, value-driven messaging.
- **Enhanced Engagement & Organizational Trust**: Increase system utility and build long-term user trust by systematically resolving frequent operational bottlenecks, costly process delays, and urgent user pain points.
- **Continuous Process Optimization**: Establish a deep, data-driven understanding of the current baseline situation to continuously improve the digital ecosystem and daily experience for the target user base.

1. CS — CUSTOMER SEGMENT(S)

Primary Customer: Employees in large enterprise organizations who need to raise workplace-related issues such as access problems, payroll discrepancies, infrastructure requests, or HR-related clarifications.

Secondary Stakeholders: HR and support teams responsible for managing employee issues.

2. J&P — JOBS-TO-BE-DONE / PROBLEMS

• Raise workplace-related issues easily.

• Provide the required information in a structured manner.

• Ensure the issue reaches the appropriate team.

• Track and manage the issue after submission.

• Avoid dependence on emails and informal communication.

3. TR — TRIGGERS

• Access or system-related problems.

• Payroll discrepancy.

• Infrastructure-related requests.

• HR policy or process clarification.

• Need to report an issue requiring organizational action.

4. EM — EMOTIONS BEFORE / AFTER

Before:

• Confused about where and how to raise an issue.

• Concerned that the issue may be overlooked.

• Frustrated by manual communication and follow-ups.

• Uncertain about the issue status.

After:

• Confident that the issue was submitted correctly.

• Clear about the information provided.

• More confident that the issue can be tracked and managed systematically.

5. AS — AVAILABLE SOLUTIONS

• Emailing HR or supporting teams.

• Informal communication with responsible teams.

• Direct communication through organizational channels.

• Existing forms or manual processes, where available.

Limitation: These approaches may not provide standardized data capture, consistent classification, or clear visibility into issue management.

6. CC — CUSTOMER CONSTRAINTS

• Uncertainty about the correct channel for raising an issue.

• Lack of standardized information requirements.

• Dependence on manual communication and follow-up.

• Difficulty identifying the appropriate team.

• Limited visibility into issue status after submission.

7. BE — BEHAVIOUR

• Sends emails describing the issue.

• Contacts HR, support, or another responsible team.

• Provides additional information when requested.

• Follows up when the issue is not resolved.

• Uses different communication channels depending on the issue.

8. CH — CHANNELS OF BEHAVIOUR

Online:

• Email

• Organizational communication platforms

• ServiceNow Service Portal

Offline:

• Direct communication with HR or support personnel

• Verbal communication

• Informal workplace communication

9. RC — PROBLEM ROOT CAUSE

The root cause is the absence of a centralized and standardized mechanism for raising and managing employee workplace issues.

As a result, issue information is captured through different channels and inconsistent formats, making tracking, classification, prioritization, and assignment more difficult.

10. SL — YOUR SOLUTION

ServiceNow Employee Issue Record Producer integrated with the Service Portal.

• Provides a centralized and employee-friendly issue-submission interface.

• Creates Employee Issue records through a Record Producer.

• Captures standardized information.

• Supports Category and Subcategory dependency handling.

• Provides validation and controlled field behavior.

• Creates structured records that can be managed within ServiceNow.

Problem–Solution Fit: The solution replaces fragmented email and informal communication with a centralized, standardized, and controlled ServiceNow-based issue-submission
