Data Flow Diagrams:

A Data Flow Diagram (DFD) is a graphical representation used to describe the movement of information within a system. It illustrates how data is received from users, processed by different system components, and finally stored or passed to the required destination. A well-structured DFD provides a clear overview of the system workflow and helps in understanding the flow of information between various processes and data stores.

For the Employee Raise Issue ServiceNow application, the DFD represents how an employee enters issue-related information through the Record Producer, how the submitted details are processed and validated, and how the information is ultimately stored in the Employee Issue table.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee	Service Portal Access	USN-1	As an employee, I want to open the Employee Raise Issue service through the Service Portal so that I can report a workplace issue using a centralized platform.	The Employee Raise Issue option is available in the Requesting Portal and opens the configured Record Producer successfully.	High	Sprint-3
Employee	Issue Information Capture	USN-2	As an employee, I want to	The Requester field allows	High	Sprint-3

			enter my requester details so that the submitted issue is linked to the correct employee.	a valid user to be selected, and the selected information is transferred to the created Employee Issue record.		
Employee	Issue Classification	USN-3	As an employee, I want to choose a Category and related Subcategory so that my workplace issue is classified correctly.	The available Subcategory options are updated based on the selected Category, allowing a valid combination to be selected before submission.	High	Sprint-3
Employee	Issue Description	USN-4	As an employee, I want to enter a Short Description so that the support team can understand the issue I am reporting.	The Short Description field captures the issue details and becomes mandatory when the State is set to New.	High	Sprint-3
Employee	Issue Submission	USN-5	As an employee, I want to submit my completed	A valid form submission creates a new Employee	High	Sprint-3

			issue request so that it can be recorded and processed in ServiceNow.	Issue record in the custom table.		
Administrator	Record Producer Mapping	USN-6	As an administrator, I want the Record Producer variables to be mapped with Employee Issue fields so that submitted information is stored properly.	The values entered or selected in the Record Producer are transferred to their corresponding fields in the Employee Issue table.	High	Sprint-3
Administrator	Validation and Field Control	USN-7	As an administrator, I want validation and field-control rules to manage the submitted information so that incomplete or invalid entries are restricted.	The configured UI Policies and field restrictions work correctly, including making Short Description mandatory when State is New.	High	Sprint-3
Administrator	Employee Issue Management	USN-8	As an administrator, I want submitted requests to be maintained as	A submitted request generates a uniquely numbered Employee Issue record	High	Sprint-3

			structured Employee Issue records so that they can be managed within ServiceNow.	containing requester, category, subcategory, description, state, priority, and assignment information as configured.
