Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	16 August 2026
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration
Maximum Marks	4 Marks

Here is the rewritten version of your Functional Requirements (FR) and Non-Functional Requirements (NFR) document. The language has been polished to be more professional, precise, and aligned with standard **ServiceNow development and implementation terminology**.

Functional Requirements (FR)

FR No.	Functional Requirement (Epic)	Sub-Requirement (Story / Sub-Task)
FR-1	Service Portal Accessibility	Enable end-users to access and launch the "Raise Employee Issue" intake form directly from the Service Portal Catalog.
FR-2	Data Capture via Intake Form	Utilize Record Producer variables to capture essential transactional details: Opened for/Requested by, Category, Subcategory, State, and Short Description.

FR-3	Form Validation & Dynamic Logic	Implement UI Policies/Client Scripts to enforce a dynamic Category-Subcategory dependency matrix, and make the Short Description field strictly mandatory when the State is set to "New".
FR-4	Target Record Generation	Automatically map the captured Record Producer variables to their corresponding fields in the custom Employee Issue (`u_employee_issue`) table upon successful form submission.

NFR No.	**Non-Functional Requirement**	**Description**
NFR-1	Usability & User Experience	Provide an intuitive, clean, and mobile-responsive Service Catalog interface that abstracts the underlying technical structure of the custom database table from the end-user.

NFR-2	Security & Access Control	Restrict access to both the Record Producer and the generated custom table records using native ServiceNow User Criteria and Access Control Lists (ACLs) based on assigned roles.
NFR-3	System Reliability	Ensure transactional integrity so that every valid form submission consistently creates an accurate record in the custom table without data loss or execution drops.
NFR-4	Performance & Response Time	Optimize client-side scripts and server-side processing to ensure the Record Producer page loads and submits within an acceptable threshold (under 2 seconds under normal load).
NFR-5	Service Availability	Maintain high availability for the intake form, ensuring it is accessible to authorized users whenever the primary

		ServiceNow instance is online.
NFR-6	Scalability & Maintainability	Design the solution using best practices (e.g., choice lists or lookup tables for Category/Subcategory) to allow system administrators to easily scale configurations without modifying core code.

Non-Functional Requirements (NFR)

Would you like me to generate the Technical Design Specification (TDS) based on these requirements, such as defining the Variable Types, UI Policy conditions, or Script configurations? Let me know what you need next!
